# Building A Marble Statue

## Step 0: Set Basic Negative prompt:

black and white, two heads, far away, blurry face, wrong eyes, wierd hands, extra hands, extra legs, wierd eyes, disfigured face, (((dark face))), ((cropped head)), ((out of frame)), ((long neck)), deformed, cripple, ugly, additional arms, additional legs, additional head, two heads, multiple people, group of people

## Step 1: Set Low Guidance Scale And Inference Steps

Start with a low guidance number since in the beginning our prompt will be quite small and vague. And and if you want keep low inference steps as well to reduce running time while building your prompt

## Step 2: Add A Subject

This is what you want to see in the image. Start with something simple and test if stable diffusion knows what it is.

**Current Prompt:** a marble status

## Step 4: Give more details to the subject

A common mistake is not writing enough about the subjects. Stable Diffusion cannot read our minds. We have to say exactly what we want.

 **Current Prompt:** A marble and jade sculpture of a woman in a dress

## Step 5: Give the medium

Medium is the material, concept or style used to make artwork. Some examples are realistic, anime, cyberpunk, 3D render. Medium has a strong effect because one keyword alone can dramatically change the style.

**Current Prompt:**  A marble and jade sculpture of a woman in a dress, ultra realistic, hyper realism, photography

## Step 6: Give the quality level

This defines the level of fine detail that we want in the image. Should it be minimalistic or extremely complex.

**Current Prompt:**  A marble and jade sculpture of a woman in a dress, ultra realistic, hyper realism, photography, ultra detailed, intricate, highly detailed

## Step 6: Give the camera and lighting info -

A primary detail that pushes up the quality of a photo is the lighting and the cinematography. Add some details based on how you want the lighting to look like.

**Current Prompt:**  A marble and jade sculpture of a woman in a dress, ultra realistic, hyper realism, photography, ultra detailed, intricate, highly detailed, cinematic lighting, volumetric fog, depth of field

## Step 7: Add Ons

Any extra information, or very vague constructs can be added to give additional effects.

**Current Prompt:**  A marble and jade sculpture of a woman in a dress, ultra realistic, hyper realism, photography, ultra detailed, intricate, highly detailed, cinematic lighting, volumetric fog, depth of field, gold ornaments, breathtaking, stunning environment

## Step 8: Change The Order

The thing to note with long descriptions is that order matters. The closer a word is to the beginning of the prompt, the more influence it has on the final image. Make sure to keep the subject at the beginning always and keep major influences at the beginning.

**Current Prompt:**  A **highly detailed** marble and jade sculpture of a woman in a dress, ultra realistic, hyper realism, photography, ultra detailed, intricate, highly detailed,

cinematic lighting, volumetric fog, depth of field, gold ornaments, breathtaking, stunning environment

## Step 8: Increase Guidance Scale And Inference Steps

Once your prompt looks good. Increase the guidance and inference to get higher quality images.
